# AUDUBON COUNTRY CLUB

NAPLES, FLORIDA

## PROJECT SUMMARY

The Audubon Country Club is a 19,000 square foot private golf community which offers tennis and fitness operations as well as casual indoor/outdoor dining. It is a has-it-all experience in the southwest region of Florida, where members come together to build a social and supportive community.

In 2020, the Lifestyle Center was newly constructed to offer an active, healthy, and social lifestyle. Tennis players of all levels are now enjoying beautiful renovations while they train, compete, or simply bond during a fun tennis match.

In the process of its upgrade, the Lifestyle Center's Exhibition Tennis Court, located on the lakeside front of the two-story Clubhouse facility, was the first tennis court to be inspected. Its poor, existing lighting of 400 Watt HV was not inviting for tennis players, nor did it meet U.S.T.A. requirement in light levels and distribution. For this change, the Audubon Country Club looked to NLS Lighting's specifically designed tennis court luminaire—VUE Tennis.

VUE Tennis 263-Watt fixture—designed by experts in lighting and tennis sport—uses a patented Star Power Optical System to give the tennis player the advantage of the game! The horizontal and vertical lumen distribution allows Tennis players to never lose sight of their game while serving at heights of 10 to 18 feet high.

The VUE Tennis creates the ideal “daylight” at night while remaining full cutoff as its light source is fully recessed and hidden. Non-glare lighting is crucial for athletes in professional, tournament and recreational levels, or even audiences that sit by the sidelines to enjoy a tennis match.

After the VUE Tennis was installed at the Exhibition Tennis Court, powerful uniformity was achieved while saving energy and meeting

U.S.T.A. requirements. It was more than just an upgrade; it was a new tennis experience.

*NLS Lighting, LLC—Outdoor LED lighting manufacturer, proudly producing made in USA product with standards of Reliability, High Quality Design and Maximum Performance.*

*nslighting.com | Intelligent, Light + Performance®*

## NLS' VUE TENNIS FEATURES AND BENEFITS

- Reduced energy consumption by 65%
- Increased existing light output by triple across the entire court with flawless uniformity.
- Provided anti-glare solution where its LED light source, 2-3 inches above the bottom plane of the fixtures was out of sight for players, spectators, neighbors and was compliant to Dark Sky guidelines.
- 30 Year Solution due to longevity of L70 rating 483,00 hours.
