

FINISHES

All of our products are finished with a textured powder coat that is 3-5 mils thick and is applied electrostatically. Our standard high-quality finishes prevent corrosion and are popular for any outdoor commercial lighting project. A variety of RAL colors are also available. They are processed and treated to create a lasting protection, even for extreme environments.

The representation of color, gloss levels, metallic pigment effects and textures are limited by technology and may vary due to screen and printer settings. This page is for reference only. It is recommended to consult factory if there is uncertainty before committing to an order by emailing support@nslighting.com.
